

MERRY CHRISTMAS
AND A HAPPY NEW YEAR

The first series-produced plug & play robot gear

The backlash-free concept of our stress wave gearboxes is now - for the first time - also available in a completely closed design with a modular motor attachment.

The design expertise, which is necessary for the integration of Flexwave components in systems, is a thing of the past. Our experienced Nidec fitters take care of the tolerances, assembly and correct lubrication.

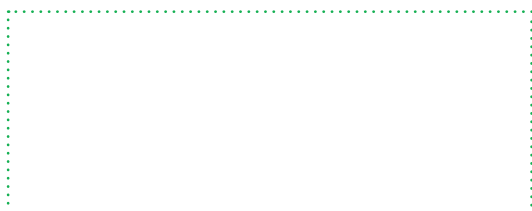

- Gear ratios from 50:1 to 160:1 in one stage
- Modular motor attachment for servomotors
- No backlash for precision in the high-end area
- Low weight with compact design
- Controlled product quality through 100% exit inspection
- Reliable delivery times even in challenging times
